

Computer-aided recovery and analysis of damaged text documents

Contents

Foreword, A. BOZZI

1. The roots of the project and the end users, A. BOZZI

PART I - The digital archives: perspectives and experiments

2. Images and texts at the "Fondazione Primo Conti", M. LA CAUZA

- 2.1 The "Fondazione Primo Conti": a brief history
- 2.2 The museum and the archive
- 2.3 Catalogue and inventory process
- 2.4 Preservation and degradation risk
- 2.5 Use, access and problems linked to the copyright of unedited material
- 2.6 Electronic management of documents and the computerisation process
- 2.7 Participation in the Cultural Heritage Project: reasons, research programme, aims and results
- 2.8 Works by Primo Conti
- 2.9 Fondazione Primo Conti notebooks
- 2.10 Joint editions
- 2.11 Fondazione Primo Conti archives

3. Information recovery and restoration on historical-diplomatic documents of the Italian Ministry of Foreign Affairs, G. SALBERINI, V. PELLEGRINI, O. FERRAILOLO

- 3.1 The Working Group and the context of the project
- 3.2 Digitisation for electronic restoration
- 3.3 Substitutive consultation of documents: digitisation and database management
- 3.4 Future prospects
- 3.5 Bibliography

PART II - Digital restoration techniques for degraded characters

4. Image restoration oriented to character recognition, L. BEDINI, A. TONAZZINI

- 4.1 Analysis of document degradation
- 4.2 A coarse to fine strategy for space-variant blind restoration
- 4.3 Toward the integration of restoration and recognition
- 4.4 Bibliography and references

5. Blind restoration of degraded texts based on Wiener Filtering, L. BEDINI, S. MINUTOLI, A. TONAZZINI

- 5.1 Blind restoration: state of the art
- 5.2 Adaptive Wiener filter for blind restoration
- 5.3 Experimental results
- 5.4 Bibliography and references

6. Markov Random Field models for blind restoration and labeling of degraded texts, A. TONAZZINI, L. BEDINI, S. MINUTOLI

- 6.1 Integration of blind restoration and labeling
- 6.2 Markov Random Field image models
- 6.3 Experimental results
- 6.4 Bibliography and references

PART III - Character recognition

7. Character recognition and the linguistic spelling checker: an integrated technique, A. BOZZI

- 7.1 Foreword
- 7.2 Optical Character Recognition (OCR) capabilities using an Radial Basis Function neural network
- 7.3 Optical Character Recognition (OCR) capabilities using Self Organising Maps
- 7.4 Transcription error analysis system, by ALBERTO RAGGIOLI

8. The linguistic module, A. BOZZI

- 8.1 The "Look up Tab" type check
- 8.2 The statistic-linguistic module
- 8.3 Assistance module for integration of fragmentary words
- 8.4 Case study

PART IV - The workstation for images and texts

9. Image and text: the workstation prototype, A. BOZZI

- 9.1 Organisation of the data in the archive
- 9.2 Personalisation of the work area
- 9.3 Document navigation
- 9.4 Document transcription
- 9.5 Annotations to the transcription
- 9.6 Creation and use of the index
- 9.7 Text-image correspondence
